

Why?
purpose
communication

cross-pollination
despectives
Working together on a team is difficult. Why? Because often times there is not enough credibility between participants. Communication conversations will happen. This is why Parallax is as much a system as a process. It provides a structure or framework for collaborative conversations. It makes collaborations more engaging. The internet is powerful and engaging because it's visually attractive.

Why have this?
I have a version of a story and you have a different version of a story. We all have different perspectives. We look at the same thing and we each have a different outlook, a different idea, a different way of seeing it. So I want to figure out a way that lets people see on their own terms.

KRONOS
Learning is a constant
challenging our ideas

What?
This is a draft collection of ideas, precedent and possible directions for Parallax, a collaborative system for:
- easily sharing experiences and establishing visual relationships between sources of information
- representing the reading activity of content at different scales, through fluid, natural, global navigation and the ability to zoom between them
- sharing these experiences with others, and being able to 'play' the same set of information through the perspective of another.

What?
This is a collaborative system that lets me create a story of a specific content.

How do you connect them? 2 pieces?
How is my system brought along in a radical way?

This system is a new combination of existing elements, in a new form, but the experience will be a whole new one, in the same way that motion camera allowed the film narrative to exist where it never existed before.
